

## ACCPAC Plus Service Packs (PTF Files)

Verify that you have the current ACCPAC Plus PTF files by going into ACCPAC Plus and pressing F3, List Version Numbers. You will see each installed program name with its version number, followed by a series of numbers, which represent the date of the current program temporary fix (PTF) file.

ACCPAC International does not authorize their Business Partners to include PTF's on our web sites, but you may use this page to check your versions. You may [email me](#) to request any PTF's that you require.

For example, notice that Accounts Payable has the numbers 970315, which would represent a patch file dated 3/15/97. Compare these numbers to the numbers in the tables below. Contact us if you need to receive the current files.

### ACCPAC Plus Version 7.0

Windowing System Manager	wsm70sp2
Accounts Receivable	ar70sp1

### ACCPAC Plus Version 6.5

Accounts Payable	650907

US Payroll 6.1D	000107 <i>(Do not install this PTF if you have a US PR update dated later than 1/1/2000.)</i>

## *Instructions on Installing ACCPAC Plus PTF Files*

### **For all PTF's except the Windowing System Manager:**

- Start ACCPAC Plus. When the Start list appears, press **F3** to display the System Manager Menu.
- Press I, or use the Up or Down Arrow key to highlight **Install Programs**, then press Enter.
- Insert the PTF diskette in your diskette drive.
- Follow the instructions on the screen.
- When you are finished, store this PTF disk with the other ACCPAC Plus program disks. If you reinstall ACCPAC in the future, you must also reinstall this PTF disk, using the Install Programs options on the System Manager Menu.

### **Installing a Windowing System Manager Service Pack**

- Make certain that you and all users have exited ACCPAC.
- From the Windows Desktop, click on **Start | Run** and type **a:install a: d:** where d: refers to the drive letter where ACCPAC is installed.
- Follow the on screen instruction. You will be prompted to enter the installation and destination drive again. Make sure these are correct and follow the remaining prompts to complete installation of the Windowing System Manager service pack or PTF.

### **Instructions for PTF files in ACCPAC.**

Create an installable floppy by downloading this file. Make note of the directory you download **to**, such as c:\download. Have a blank formatted floppy ready for each patch that you receive.

Assuming that you download your files into c:\download, here is the command. The example is for the AP 990222 patch – please substitute with the appropriate filename(s).

Assuming it is C:\download, use the following command, from DOS:

```
C:\download\ap990222 -d a:
```

Then, from ACCPAC (with everyone **out** of ACCPAC except you) press F3 and select Install Programs. Follow the onscreen directions. It goes fast, depending upon your system, you may not even think it work.

Now, when you press F3, list version numbers, your patches will show up by the programs, such as:

**Accounts Payable 990222**

Congratulations! Your PTF has been successfully downloaded and installed!
